ENAI

IT-Projectlead

ENAI
A safe and comfortable life

For professional service providers, we are happy to be the knowledge partner in continuity with solutions without having to worry about anything. We ensure that our customers can fully focus on their services. And in the background, we are happy to ensure that all information & systems are always available in a secure manner.

We supply the ENAI service platform for managed services. Our solutions are currently often used by professional service providers in the security industry.

We always see opportunity in connecting, interpreting and/or presenting information sources, which makes it possible for professional service providers to act not only reactively, but also proactively valuable information.

With you, things get better! Will you join our team?

We are looking for an IT project leader who can lead various IT projects focused on software, applications and infrastructure in an informal organization.

- Together with the Program Manager and 2 other project leaders, you will work on renewing, expanding and improving the ENAI solutions. In this role you are the important link between internal and external clients, partner suppliers and the project team.
- In this role you are responsible for both small and large projects. There are currently 30 projects in the pipeline. The duration of a project can vary from 2 weeks to a year. Every project is different, so it requires flexibility and good communication with colleagues and stakeholders.
- You are responsible for communicating with stakeholders, project planning, organizing implementation, managing the team and monitoring progress and project risks. You have a strong position, between experienced and driven IT colleagues on the one hand and committed customers with their own priorities on the other. With a healthy dose of persuasion, the projects are managed in the right direction, both in terms of process and content.

#Education & experience
- HBO work and thinking level
- At least 3 years of work experience as a project leader in an IT environment
- Project management methodology (PRINCE2/Agile/Scrum)
